

Systime: PLUS.SYSTIME.DK

This is a web-based educational programme for upper secondary mathematics

Positive comments

- The web pages are well organized and structured
- The exercises appear interesting and relevant to everyday life
- There are a number of tools such as a calculator, a note tool and a graph drawing programme which are easy to use
- The note tool gives the learner the opportunity to reflect on the learning process and to monitor his or her own progress
- The use of video clips helps the learner to understand the material
- The learner is able to choose which tasks to undertake, which develops autonomous learning

Criticisms

- Solutions to specific tasks are not always provided on screen
- The content could be presented in a more inter-active way with more use of multi-media eg audio
- Collaborative activity could be more obviously encouraged
